FROM VP Sales, BTX Precision Machining
SUBJECT 5-axis capacity for F-35 lot-19 build-to-print spares

Hi Jordan,

Congratulations on the F-35 lot-19 sustainment award. As spares volume ramps into FY27, I wanted to introduce BTX as a domestic partner with open 5-axis capacity right now.

We are an AS9100D, ITAR-registered precision machining shop specializing in build-to-print work for aerospace primes. Against the lot-19 spares scope we assess a 91% capability fit, and we hold a trailing-12-month on-time delivery rate of 99.2% with a sub-15 PPM quality escape rate.

Would you be open to a 20-minute call to walk through your build-to-print spares needs and where our current capacity could take load off your schedule?

Best regards,
Alex Chen · VP Sales · BTX Precision Machining
